

Built around the life of your assets.

From our base in Doha, we bring tank treatment, hydrocarbon recovery and asset integrity into one coordinated approach.

Prepared from the current website content. Leadership messages and unpublished agreement terms are not included.

01 / Company & approach

02 / Services & capabilities

03 / Strategic direction

Expertise across the tank lifecycle.

01 Tank cleaning & sludge treatment

Crude, fuel, slop and product tanks treated in place with M-1000 hydrocarbon-degrading cultures.

02 Hydrocarbon recovery

Paraffin chains from C16 to C60+ broken down so oil and water separate and the oil goes back to stock.

03 Decontamination & degassing

Safe-entry preparation to API 2015 for diesel, fuel oil, lube, jet fuel and gasoline-range residues.

04 Inspection support

Tanks prepared and presented for API 653 inspection, with NDT coordinated through your approved inspectors.

05 Flow assurance & asset integrity

Para-Bac and Corroso-Bac programmes against paraffin, scale and corrosion in lines, vessels and separators.

06 Coating & rehabilitation

Floor and shell repair, lining and coating to return an inspected tank to service life.

07 Preventive maintenance

Scheduled dosing and condition monitoring that keeps sludge from building up between turnarounds.

08 Environmental remediation

Landfarming, biopiles and contaminated-soil treatment with the M-1000 LF and PAH lines.

Recover value. Build capability. Grow responsibly.

Our direction connects the value delivered on every tank with the people, technology and local capabilities needed for the next project.

01 / Value from every asset

Make recovery, downtime and total lifecycle cost central to the scope of each project.

02 / Safety in the method

Prioritise treatment through existing nozzles and align delivery with the operator's HSE system.

03 / Capability close to the client

Build local crews, engineering knowledge and equipment capability as the business grows.

04 / Disciplined regional growth

Develop market by market, with qualification and local requirements addressed before delivery.
